# 1 Overview

The proposed method preserves 47.5% accuracy under shift.

See [1] for the data source.

# 2 Measurements

Observed values are not estimates.

Left column statement.

Left column continuation.

Right column statement.

Right column continuation.

Table 1: Measurements (units)

| Group | Count | Rate |
|---|---|---|
| Control | 120 | 47.5% |
| Method | 115 | 52.0% |

Notes: percentages use the full cohort.

The relation is defined as follows.

E = m c^2 (1)

Algorithm 1: Stable update

1. Initialize parameter vector.
2. Update using the measured gradient.
